Seeing as how the original one-shot for some reason is not available in English on MangaDex at least, I figured I'd work out a means to put it up. Credit fully goes to Morra dos Scans and RKRNScans for their work. I used primarily the pages from the former due to them being just a smidge higher of a resolution than the copies of the latter's translation aside from one page and tweaked the latter's translation mostly for the sake of having things feel a bit more natural. My idea behind this was to try and make something that feels like it could be slotted in with the official translations without feeling too out of place. Basically, think of this as being a take on what might've happened if the volumes decided to include this as a bonus chapter.

Of course, whether or not I succeeded is entirely up to you but I hope you'll enjoy nonetheless.
